

a ITPR2 (9YKK)

1 pathogenic, 7 benign

b ITPR3 (8TKG)

5 pathogenic, 11 benign

c two of four structures may carry a human variant position**d** pathogenic variants are counted per element against the rest of the protein

a ring marks $q < 0.05$ after Benjamini-Hochberg over all 15 element tests; the number above each point is its count of pathogenic positions; a triangle is an infinite odds ratio (a zero cell), drawn at the ceiling. Element labels are coloured by gene.
