

a ITPR2 (9YKK)

1 pathogenic, 7 benign

b ITPR3 (8TKG)

5 pathogenic, 11 benign

c which structures may carry a human variant position**d** where the pathogenic variants are, per element

ringed = $q < 0.05$ after Benjamini–Hochberg over all 15 element tests; the number above each point is its count of pathogenic positions; a triangle is an infinite odds ratio (a zero cell), drawn at the ceiling. Element labels are coloured by gene.
